Advances in Robotic-Assisted Urologic Surgery

Robotic radical prostatectomy is the current gold standard surgical treatment for prostate cancer, and it has paved the way for other robotic urologic procedures. Robotic partial nephrectomy is rapidly becoming the preferred modality for nephron-sparing surgery, offering a minimally invasive approach also for more complex renal masses.

Robotic-assisted surgery for the treatment of urologic ...

In recent years, the evolution of robotic surgery has enabled urologic surgeons to perform urinary diversions intracorporeally. Robotic vasectomy reversal and several other robotic andrological applications are being explored. In summary, robotic-assisted surgery is an emerging and safe technology for most urologic operations.

Since the introduction of robot-assisted radical prostatectomy (RALP), robotics has become increasingly more commonplace in the armamentarium of the urologic surgeon. Robotic utilization has exploded across surgical disciplines well beyond the fields of urology and prostate surgery.

Advances in Robotic-Assisted Radical Prostatectomy over Time

The first case report of robotic-assisted VVF repair was reported by Melamud et al. in 2005. 47 After dissection and excision of the fistula with conventional laparoscopy, a surgical robot was used to close the vagina and bladder without complications. Fibrin glue was injected between the bladder and vagina to separate the suture lines.
