Human Respiratory System

The main function of the respiratory system is to take in air, absorb oxygen into the bloodstream which is taken throughout the body, and breathe out carbon dioxide. The respiration process involves breathing of gases into the human body from the environment which is circulated in the body and then released back into the environment.

The main function of the respiratory system - Majestic Grades

The human respiratory system consists of a group of organs and tissues that help us to breathe. Lungs are the primary organs of the respiratory system which help in the exchange of gases. The other main parts of this system include a series of airways for air passages, blood vessels, and the muscles that facilitate breathing.

grade 7 science respiratory system Flashcards and Study ...

The human respiratory system is adapted to allow air to pass in and out of the body, and for efficient gas exchange to happen. Exercise and smoking both affect the lungs and circulatory system.

The respiratory system test questions - GCSE Biology ...

The design of the respiratory system. The human gas-exchanging organ, the lung, is located in the thorax, where its delicate tissues are protected by the bony and muscular thoracic cage. The lung provides the tissues of the human body with a continuous flow of oxygen and clears the blood of the gaseous waste product, carbon dioxide. Atmospheric air is pumped in and out regularly through a system ...
