These solutions reflect assignments made by Professor Larsen at the University of Michigan during his two-semester course on Quantum Field Theory during the academic year 2003-2004. (As an extra disclaimer to the cautious student: I took this course when I was a second-year undergraduate; but I did preform consistently at the top of the class).

Jackson 3.6 Homework Problem Solution Dr. Christopher S. Baird University of Massachusetts Lowell
PROBLEM: Two point charges q and $-q$ are located on the z axis at $z = +a$ and $z = -a$, respectively.
(a) Find the electrostatic potential as an expansion in spherical harmonics and powers of r for both $r > a$ and $r < a$. (b) Keeping the product $qa = p/2$ constant, take the limit of $a \rightarrow 0$ and find the ...

Homework #3 Solutions University of Illinois at Chicago Spring 2015 (c) Now use magnitude scaling (with an appropriate value for k m) to make all capacitors equal to $1\mu\text{F}$ which is a more practical value. Solution: Now we need to scale the components so that all capacitors are $1\mu\text{F}$. We can do this by using magnitude scaling factor k m . With magnitude scaling, the new and old values of the resistors and capacitors
