## **IBM Spectrum Scale (formerly GPFS) | IBM Redbooks**

IBM Spectrum Scale, formerly the General Parallel File System (GPFS) is high-performance clustered file system software developed by IBM. It can be deployed in shared-disk or shared-nothing distributed parallel modes, or a combination of these.

## **GPFS - Wikipedia**

Spectrum Scale is IBM's mature scale-out and parallel access file system that supports from 1 to 16,384 nodes. It used to be called GPFS (General Parallel File System). A specific CES (Cluster Export Services) cluster of its nodes provides NAS access as a gateway to Spectrum Scale data. CES supports NFS v4 and Server Message Block (SMB) v3 access.
