Materials and methods: In this prospective cohort study, body mass index (BMI) and sagittal abdominal diameter (SAD) were measured in all patients with severe sepsis immediately after admission in the intensive care unit (ICU). The patients were followed up until death or discharge from ICU. The study's primary outcome measure was mortality until day 60 after admission, while secondary outcomes were morbidity, length of stay, and length of ventilation in ICU.

future ine

One way to assess the abdomen is to measure intra-abdominal pressure (IAP). The standard method recommended by the World Society of the Abdominal Compartment Syndrome is the vesical technique, using a Foley urinary catheter, with the mid-axillary line as zero level, infusion of no more than 25 ml of water into the empty bladder, in a 0° supine position, with measurements taken at the end of expiration when the patient is at rest in bed without abdominal contractions.

Relationship between Sequential Organ Failure Assessment ...

The Washington University Fellowship in Anesthesiology for Abdominal Organ Transplantation offers a non-ACGME accredited position at one of the top transplant centers in the U.S. The one-year Fellowship offers comprehensive training in the perioperative care of adult patients undergoing an abdominal Page 6/10

organ transplant, with added experience in complex hepatobiliary, vascular and cardiothoracic surgery.

Fellowships - Anesthesiology

Emergency management and stabilization of the abdominal surgery patient takes two general paths: 1) surgery as the means to stabilization, and 2) ICU care before surgery to stabilize the patient.

ICU care of abdominal organ transplant patients (Book ... METHODS: We studied all patients admitted to the intensive care unit (ICU) because of SAP in a 4 year period. The incidence of IAH (defined as intra-abdominal pressure >or= 15 mmHg) was

recorded. The occurrence of organ dysfunction during ICU stay was recorded, as was the length of stay in the ICU and outcome.

Intra-abdominal hypertension in patients with severe acute ...

The deleterious effects of raised intra-abdominal pressure (IAP) on organ function and mortality have been known for decades, even centuries. Interest in this phenomenon has revived since the 1980s and, recently, the World Society for the Abdominal Compartment Syndrome has published new consensus definitions and guidelines. This chapter will focus on the new definitions for intra-abdominal ...
