Matrix Analysis - Cambridge University Press

Roger Alan Horn is an American mathematician specializing in matrix analysis. He was Research Professor of mathematics at the University of Utah. He is known for formulating the Bateman–Horn conjecture with Paul T. Bateman on the density of prime number values generated by systems of polynomials. His books Matrix Analysis and Topics in Matrix Analysis, co-written with Charles R. Johnson, are standard texts in advanced linear algebra.

A matrix norm that satisfies this additional property is called a submultiplicative norm (in some books, the terminology matrix norm is used only for those norms which are submultiplicative). The set of all $n \times n$ $\{\displaystyle n \times n\}$ matrices, together with such a submultiplicative norm, is an example of a Banach algebra .
